

Quick setup - if you know how to operate, use the following address

HTTPS

SSH

https://gitee.com/caibaba/uboot22.git

We strongly recommend that all git repository have a `README` , `LICENSE` , `.gitignore` file

Init readme file

Git tutorial? View [Help](#) , [Visual Studio](#) / [TortoiseGit](#) / [Eclipse](#) / [Xcode](#) How to connect site, [How to import repository](#)

A simple command-line tutorial:

Git global settings:

```
git config --global user.name "caibaba"
git config --global user.email "635432187@qq.com"
```

Create git repository:

```
mkdir uboot22
cd uboot22
git init
touch README.md
git add README.md
git commit -m "first commit"
git remote add origin https://gitee.com/caibaba/uboot22.git
git push -u origin master
```

Existing repository?

```
cd existing_git_repo
git remote add origin https://gitee.com/caibaba/uboot22.git
git push -u origin master
```
